SUBJECT: Correction to Risk Condition 337 on the Breastfeeding and Postpartum Participant Forms (WIC-40 & WIC- 41)

We recently noticed a discrepancy on the Breastfeeding and Postpartum Participant Forms for risk condition 337, *History of Birth of a Large for Gestational Age Infant*. The forms indicate that the risk condition is limited to the most recent pregnancy outcome; however, the nutrition risk criteria definition includes "most recent pregnancy or history of" birth of a large for gestational age infant.

The forms have been corrected to indicate that the risk condition applies to "any birth" of a large for gestational age infant. You may continue to use the current forms dated 11/1/2000 until you need to replenish your supply. The revision date on the corrected forms will be 11/2000. If you have any questions regarding this memo, contact Paula Kanter, Clinical Nutrition Specialist, at (512) 458-7111, ext. 3528, or paula.kanter@tdh.state.tx.us.
